AGECLA ECO GREEN

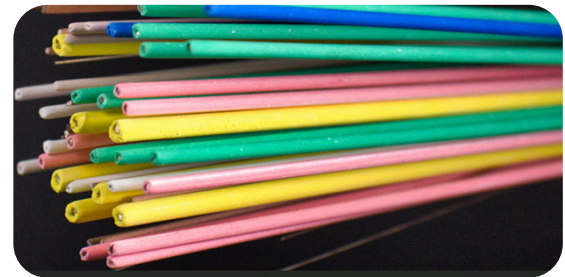

The new generation of sustainable,
high-performance fluxes

The **AGECLA Eco Green** line represents the natural evolution of our fluxes: high-performance products developed to meet the most demanding technical requirements while **fully complying with environmental and safety regulations**. With this new range, THESSCO reaffirms its mission to provide reliable, innovative solutions that combine production efficiency with responsibility towards **people and the environment**.

KEY FEATURES

- ✓ Eco-friendly formulation: free from boric acid and with a controlled use of borates that **eliminates reprotoxicity**.
- ✓ Certified safety: the products do not carry the **H360 and H361** (reprotoxic) risk phrases.
- ✓ REACH compliant: **fully compliant** with European health and environmental standards.
- ✓ Maximum versatility: available in **powder, paste, and coated rods**, to suit all process requirements.

COMPETITIVE ADVANTAGES

Reduced risk and improved operator safety: working without reprotoxic risk phrases means a safer workplace and more sustainable processes.

Continuous technological innovation: AGECLA Eco Green is the result of ongoing research and development, anticipating both regulatory changes and market expectations.

High performance maintained: the eco-friendly reformulation does not compromise quality, ensuring efficiency and reliability in every application.
